Gr 3–6—This set provides a springboard into information gathering. As is accepted practice with encyclopedias, the tone is objective and factual . . . The alphabetically arranged articles range in length from a few paragraphs up to nine pages for the entry on the United States. They will be used for reports and ready reference, but children with some background in a topic will also need to use more detailed reference sources and specialized books. Most entries have at least one illustration, and these color photos, drawings, archival reproductions, time lines, maps, and diagrams add information and appeal. Large type and widely spaced double columns set off the illustrations and make the material easy to read. The use of color pages for entries on places—green for the U.S. states and Canadian provinces, yellow for countries, and purple for continents—makes access easy. . . . Britannica is a solid choice as an introductory reference resource. It will be useful in school and public libraries, especially where there are many requests for assignment materials and where children do reports.
