SmartMath

MatheMAT|CS

Britannica SmartMath provides online formative assessment and math practice system for elementary students. The program offers access to 35,000 math problems covering 91 topics aligned to NCTM (National Council of Teachers of Mathematics) standards. The material focuses on the five learning dimensions of math – numbers, measures, shapes and space, data handling, and algebra. The level of difficulty increases progressively, corresponding to the student performance; the same question is never presented twice. If appropriate, remediation topics are suggested. The Instant Progress Check feature provides teachers with the access to information covering student time on task, success rates, and item analysis. Downloadable reports can analyze class performance and overall progress. Formative Assessments may be customized for a grade, a class, or individual students by state standards. *Britannica Digital Learning, www.info.eb.com*
